Hyflex[®] Graphic White cover material is a revolutionary new offset-printable cover material available in 3 thicknesses. It was designed to outperform traditional C1S litho in terms of durability and wear resistance. When printed, an extremely strong bond is formed between the paper and the ink, creating a resilient finished product. Under distress, the printing on Hyflex[®] Graphic White will not crack as easily as a litho sheet. Products covered in Hyflex[®] will maintain a luxurious appearance while resisting the signs of normal wear and tear. In addition, the latex-saturated fibers of Hyflex[®] Graphic White provide exceptional strength, eliminating the need for film lamination after printing. The high performance of Hyflex[®] Graphic White makes it perfect for applications which demand superior graphic cover materials.
